

Create curvature surface with three line by gmesh

Error curvature surface 1

Exactly curvature surface 2

- Surface 1, which is composed of three lines, is sagged down or protrudes
- Surface 2, which is composed of four lines, is exact. When viewed along the z-axis, the dashed line and the green line are the same
- I want to create surface 1 exactly like surface 2. When viewed along the z-axis, the dashed line and the green line are the same

Thank you, Sir
